

General Information

Character Cards

Represent the characters that you can cast into play and use to attack or defend.

- Each character card has a name, a stage level, mana cost, hit points, and abilities.
- The mana cost is the amount of mana you need to pay to cast the character card from your hand, located in the top right of the card as a dice symbol.
- The hit points (HP) are the amount of damage the character can take before being destroyed.
- The character abilities are special effects that the character can use with mana. The mana cost is shown to the left of the ability in a circle. Some abilities are passive, meaning they are always active and do not require any mana to use.
- Character cards come in three stages: stage 1 (S1), stage 2 (S2), and stage 3 (S3). S1 characters are the basic characters that you can cast normally. S2 and S3 characters are the advanced characters that require a previous stage character to be cast.
- To cast a S2 character, you need to place it on top of an active S1 character, effectively replacing it. To cast a S3 character, you need to place it on top of an active S2 character, effectively replacing it. You still need to pay the mana cost of the S2 or S3 character.
- S2 and S3 characters have higher power, toughness, and/or abilities than S1 characters, making them more powerful and versatile in the game. However, they also have higher mana costs, making them harder to cast.
- When a character is used to attack or block, it must tap (turn sideways) to show that it is engaged in combat. A tapped character cannot attack or block again until it is untapped. A character is untapped at the beginning of its controller's turn, unless it has an ability that prevents it from untapping.

Action Cards

Action cards are single use cards that you can play from your hand to modify the outcome of the game. They have various effects, such as boosting the power or toughness of a character, dealing damage to a character or player, drawing more cards, etc.

- Action cards come in two types: free action cards and paid action cards. Free action cards do not have a mana cost, and can be played at any time, even during your opponent's turn. Paid action cards have a small mana cost, and can only be played during your own turn, when you have enough mana to pay for them.
- Each action card has a name, an effect, and a mana cost that may vary. The mana cost is located in the top right corner of the card as a dice symbol. Free action cards have a zero on the dice symbol.
- The effect is the special action that the card performs when you play it.
- You can play free action cards in response to other action cards, creating a stack of effects that resolve in reverse order. The last action card played is the first one to resolve, and so on.
- You can only play one action card per turn, unless you have a card or character ability that allows you to play more.

Mana System

You get mana by rolling the dice at the beginning of each turn. The result of the dice roll is your mana for that turn. You can use your mana to cast character cards, cast action cards, or to shop for more cards from the deck.

- Each card has a mana cost shown on the top right corner of the card, and you need to have enough mana to pay for playing it.
- You can produce extra mana by discarding cards from your hand. You can discard any number of cards from your hand once per turn, and get one additional mana point for each card discarded. You can use this ability to get rid of unwanted cards, or to get more mana for casting more expensive cards. However, you should be careful not to discard too many cards, as you will have fewer options and resources later in the game.
- Certain action cards also have the ability to temporarily boost your mana production.

Card Shop

The card shop is a feature that allows you to buy additional cards from the deck with your mana. You can use the shop to get more cards for your hand, or to replace cards that you don't want or need.

- You can access the shop during your turn, after you roll the dice and get mana for that phase.

- The shop has two types of cards: action cards and character cards. Each action card costs 2 mana, and each character card costs 3 mana. You can buy any number of cards from the shop, as long as you have enough mana to pay for them.

Basic Roll Phase

The roll phase is played at the start of your turn where you roll a single six-sided dice (d6) to determine your mana and your fate.

- When you roll the dice, you need to match or roll higher than the previous player's roll. If you fail to do so, you take damage equal to the roll total. For example, if the previous player rolled a 4, and you rolled a 3, you take 3 damage to your player health. While damage is inflicted, you still get the mana and opportunity to play your turn.
- If you succeed in matching or rolling higher than the previous player's roll, the roll total becomes your available mana to spend this turn. For example, if the previous player rolled a 4, and you rolled a 5, you have 5 mana to use.
- Rolling a 6 resets the dice total and gives you six mana, but lowers the next player's roll requirement.

Status Effects

Status effects are special conditions that can affect the characters in the game, either positively or negatively. They can be caused by various sources, such as character abilities, or action cards.

- Status effects are represented by status effect cards or action cards, which are placed above the affected character card to indicate its status. Each status card has a name, a symbol, and a description of its effect.
- There are four main types of status effects: instant, timed, conditional, and permanent.
 - **Instant** status effects happen right away and then go away. They do not need a status card to show them. For example, healing or damage are instant status effects.
 - **Timed** status effects last for a certain number of turns or phases. They need a status card to show them and how long they last. A token can be used to track the duration of a timed status effect. Each turn or phase that the status effect is active, a token is placed on the status card. When the

- number of tokens matches the duration of the status effect, the status effect ends and the status card is removed.
- **Conditional** status effects only happen when something else happens. They need a status card to show them and what triggers them.
 - **Permanent** status effects last until they are removed by something else. They need a status card to show them and what can remove them.
 - Status effects can also interact with each other in different ways, such as stacking, replacing, or canceling.
 - **Stack** means that the same status effect can be applied more than once to the same character, making it stronger, weaker, or the duration longer.
 - **Replace** means that a new status effect can take the place of an old status effect.
 - **Cancel** means that a status effect can stop another status effect from working.

Gameplay Instructions

Player Health

Each player starts the game with 20 health, tracked on a sheet of paper.

Draw Phase

Each player draws 4 action cards and 3 character cards from the deck.

Roll Off Phase

- Each player rolls the dice, and the highest roll determines who goes first.
- If there is a tie, the tied players roll again until a winner is determined.

Etiquette Phase

The Etiquette Phase is a one-turn round at the beginning of each game, where players pretend to respect their opponents. No character abilities or action cards can be used during this phase.

- The Roll Off winner rolls the dice to get their mana for this phase.
- The player can spend their mana to cast character cards into the game or buy more cards from the shop.

- The first player ends their turn and passes the dice to the next player clockwise.
- The next player rolls the dice and gets their mana for this phase. They can cast characters or use the shop with their mana. However, if their roll is lower than the previous player's roll, they also lose player health equal to their roll.
- The initial casting phase ends when all players have had a turn.

Combat Phase

The Combat Phase is the main part of the game, where players try to destroy each other by any means possible.

- The Roll Off winner rolls the dice and gets their mana for this phase. They can cast characters, play action cards, attack with characters abilities, or shop with their mana. However, if their roll is lower than the previous player's roll, they also lose player health equal to their roll.
- The player can cast a character card from their hand by paying its mana cost, and use a character's abilities immediately after being cast, unless it says otherwise on the card.
- The active player can choose which character's ability they want to use, and pay the mana cost to activate and which enemy player they want to target with the ability.
- The active player must tap (turn sideways) their character card to show that they are using the ability. Tapped characters are not able to block until untapped at the player's next turn.
- The defending player can declare blockers, choosing which characters they want to block with. The blocking characters must also tap to show that they are blocking.
- The active player can play action cards from their hand at any time during their turn, paying their mana cost if required.
- The defending players can play free action cards from their hand, action cards can be played in response to other action cards, creating a stack of effects that resolve in reverse order.
- Once attackers and blockers are determined the combat damage is dealt, if a character's toughness is reduced to zero or less, it is destroyed and put into the graveyard.
- If a character is blocked by another character, and the damage dealt by the attacking character is not enough to kill the blocking character, the damage is tracked using a token for each hit applied.
- If a character's attack is unblocked, it deals damage to the player it is attacking.

- The active player ends their turn and passes the dice to the next player clockwise.
- The combat phase continues until there is only one player or team left in the game, who is the winner.
